body { padding: 10px 20px; }

Realtime Markdown Editor

What is this?

Type your markdown into the box on the left and immediately see if on the box on the right. If you send a friend a link to a pad URL (other than the home page) you both can edit the document at the same time!

How to use this?

Type anything after the slash in "https://realtimemarkdown.herokuapp.com/" and just start creating markdown. If you don't feel typing in the address bar, feel free to go to one of these markdown pads:

- https://realtimemarkdown.herokuapp.com/sample (https://realtimemarkdown.herokuapp.com/sample)
- https://realtimemarkdown.herokuapp.com/my_project (https://realtimemarkdown.herokuapp.com/my_project)
- https://realtimemarkdown.herokuapp.com/whatever (https://realtimemarkdown.herokuapp.com/whatever)

How was this built?

This website uses the following to work:

- Markdown (https://github.com/showdownjs/showdown) - Converts markdown text to beautiful HTML
- ShareJS (http://sharejs.org/) - allows for realtime editing of this textbox
- Node.js (https://nodejs.org/) - backend framework
- Redis (http://redis.io/) - where we store our markdown documents
- Twitter Bootstrap (http://getbootstrap.com/) - makes everything a little prettier
